

Project Proposal

Project Report

**Submitted by:
Sayed Shabir**

**Submitted to:
Dr. Sajid Anwar**

1.Project Name

Employee Management System

2.Client

Veevo Tech

3.Client Information

Veevo tech is a Technology Company in Pakistan. Veevo tech is known for its innovation in business automation, IT, Telecom Vas and AI based IOT products. Veevo tech aims to change the lives with technology adding ease and standard in life. Veevo Tech holds years of experience in IT & Telecom field and has successfully launched a number of products with both corporate and consumer segments. The products include biometric technologies, scalable load-intensive software designing, SMS/Robo Calls solutions, state of the art security solutions, Mobile Advertisement, smart electronic gadgets etc. our products are being used by millions of people across the globe.

4.Objectives

The main objective of employee management will be effectively monitoring employee performance. It will let us know what tasks our employees are working on, how long they spend time on each task, and how productive they will be at their work.

Furthermore, following are the points and objectives we will have to achieve through this system.

- It will simplify the tasks of maintaining records of the employees of the company.
- Develop a well-designed data base to store employee information, history etc.
- Provide full functional report to the management of the company.
- Time and attendance tracking: Tracking employee attendance and working hours to ensure that they are meeting their work obligations and project deadlines.
- Performance monitoring: Monitoring the performance of employees, including their productivity, quality of work, and adherence to project timelines and milestones.

- Time and attendance tracking: Tracking employee attendance and working hours to ensure that they are meeting their work obligations and project deadlines.
- Incentive and reward management: Providing incentives and rewards to employees for their exceptional performance and contribution to the project.
- Communication and collaboration: Facilitating effective communication and collaboration among team members to ensure smooth functioning of the project.
- By effectively managing employees, an employee management system can help ensure that software projects are completed on time, within budget, and to a high level of quality.

5.Problem Statement and Description

- Slow process of human Resource.
- Security of employee records and of the company
- Difficulty in monitoring their daily records
- Slow retrieval of data
- Paper Wastage
- Poor Data storage
- Unsecured Data

6.Scope

We will be able to provide different organizations a software with in a website that will provide them a HR management system. User will be able to store employee data from the admin side while the employee will be able to check for the tasks given to him, furthermore employees will be able to check and generate pay slip.

Requirements

The information of the two users who are signing these agreements.

The date and time should be agreed upon by those users.

Selection Criteria

The following are the reasons for selecting this process model:

- Small releases of the software which would result in reducing risk.
- Team Work
- Continuous testing throughout the project.
- Good Planning and co-operation between the team and the stakeholders/customers
- Simple and decent design
- Collective Ownership.
- Specific amount of work throughout the week,
- Most of the focus is on developer <-> customer interaction which increases the success of a software

Process Model:

We will be using the “agile developmental process” for the development of this software.

Overview

The agile development Model depicts the software development process in a sequential linear flow. After each and every phase is completed, it is released into the server/internet and provided it to the customer through which there is a reduce in risk of changes. It also helps in maintaining a good environment between the developer and the stake holder. Each phase is tested and feedback is given, pair programming is also a part of agile development which helps in creating different logics easily with the help of both partners. In an agile development process, the project is broken down into a series of iterations or sprints, each of which involves planning, designing, coding, testing, and reviewing. The idea is to produce a working product at the end of each iteration, rather than waiting until the entire project is complete.

Justification

Following are the reason for choosing this process model:

1. Customer Satisfaction:

By delivering working software early and often, the agile development model prioritizes customer satisfaction and ensures that the final product meets their needs.

2. Requirement Gathering and

analysis: In agile model All possible requirements of the system to be developed are captured in this phase.

3. Flexibility: The agile development model is designed to be flexible and adaptable to changing requirements, which is especially important in a project like employee management, where requirements may change frequently.

4. System Design: The requirement specifications from first phase are studied in this phase and the system design is prepared. This system design helps in specifying hardware and system requirements and helps in defining the overall system architecture

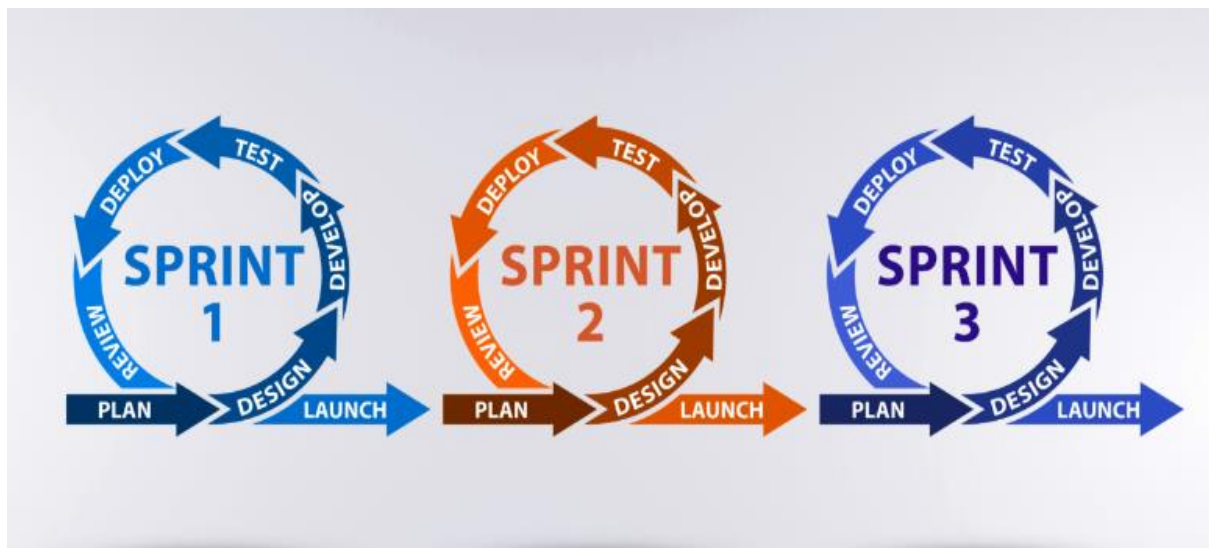

5. Transparency: The iterative nature of the agile development model ensures that progress is visible and transparent to all stakeholders, which can help build trust and improve communication.

6. Maintenance: There are some issues which come up in the client environment. To fix those issues, patches are released. Also, to enhance the product

some better versions are released. Maintenance is done to deliver these changes in the customer environment

7. Overall: Overall, the agile development model can help ensure that the employee management system is developed efficiently, with a focus on customer satisfaction and high-quality results. It also allows for flexibility and adaptability to changing requirements, which is important in today's fast-paced business environment.

Agile Developmental Model

REQUIREMENT SPECIFICATION.

FUNCTIONAL REQUIREMENTS:

- The system shall give personal information of the employee.
- The system shall give Job and salary history.
- The system shall give Banking and tax details.
- The system shall give Insurance plans.
- The system shall maintain Time off requests.
- The system shall give Disciplinary history.
- The system shall give Performance feedback.

Non-functional Requirements:

Security:

Only registered users can login since they have an ID number and a password.

Usability:

The system should provide interactive user-friendly interface that is easily understandable.

Dependability:

The system should provide consistent performance with easy tracking of records and save records for future use.

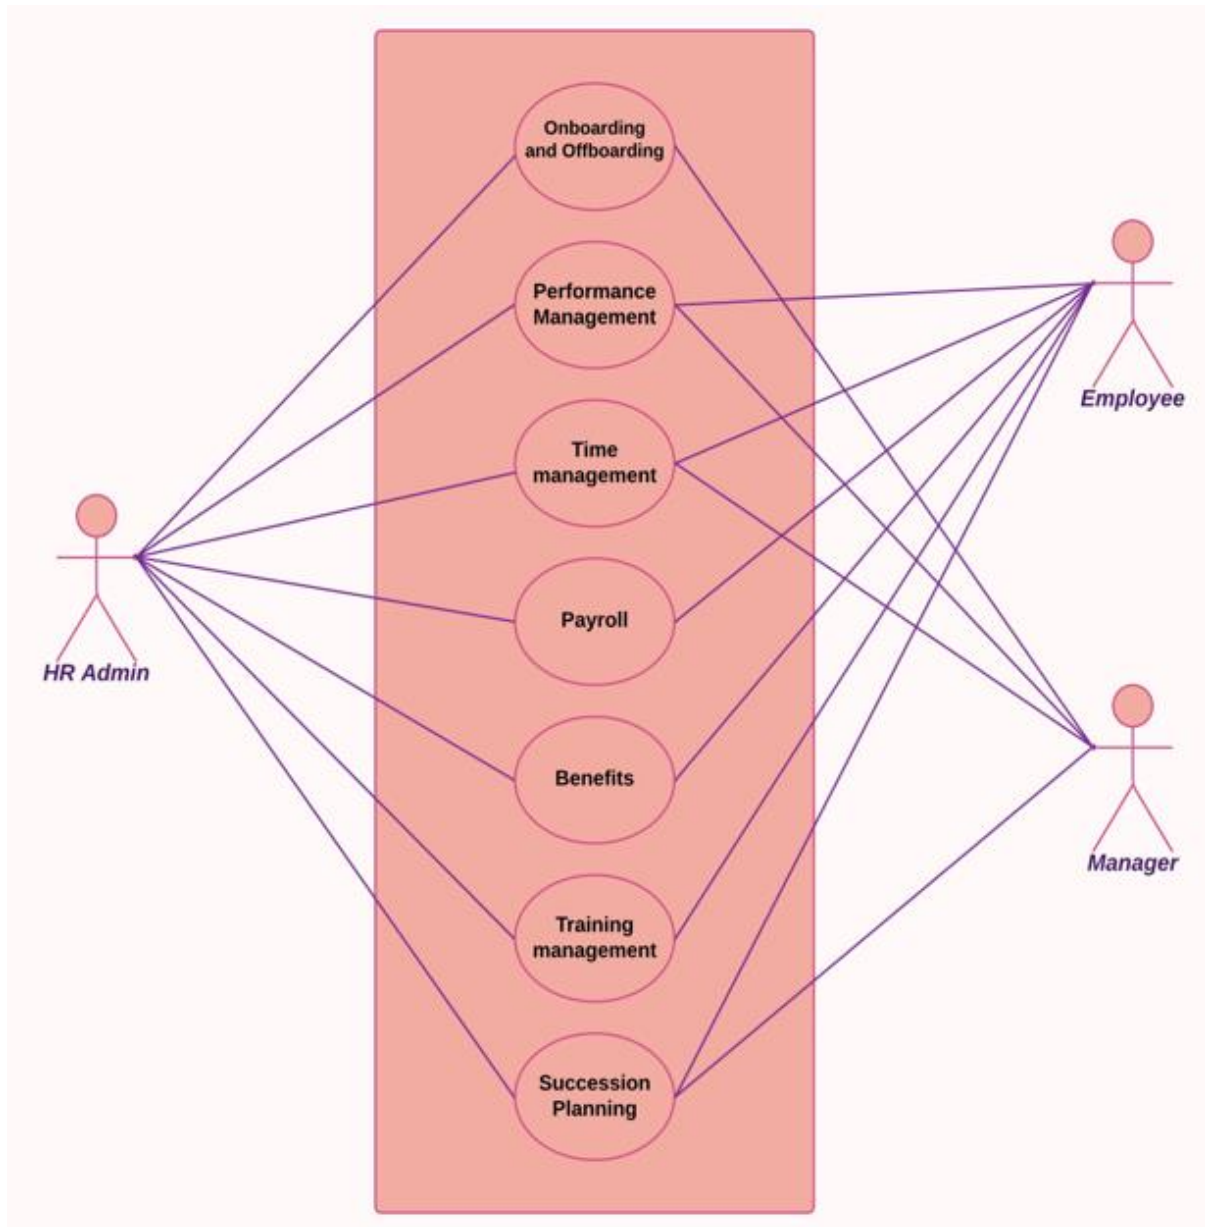

Maintainability:

The Software should be easily maintainable and adding new features and making changes to the software must be as simple as possible.

Availability:

The system should be available at least during the office operating hours and must be recovered with an hour or less if it fails.

High level use case diagram:

Use Cases:

UC 01: Onboarding and Offboarding

Use Case	Onboarding and Offboarding
Actors	HR Manager, New Employee, Manager
Description	The HR Manager creates a new employee profile in the EMS, which includes onboarding forms, orientation training, IT setup, and access management. The new employee completes the forms, attends orientation, and receives necessary equipment and access to IT

	systems. When an employee leaves the organization, the HR Manager removes their access to company systems and assets.
--	---

UC 02: Performance Management

Use Case	Performance Management
Actors	HR Manager, Employee, Manager
Type	Primary
Description	The HR Manager sets up performance evaluation cycles in the EMS. The manager sets performance goals for their employees, monitors performance metrics, and provides continuous feedback. The employee uses the system to view their progress towards their goals and submits feedback.

UC 03: Time and Attendance Management

Use Case	Time and Attendance Management
Actors	HR Manager, Employee, Manager
Type	Primary
Description	The HR Manager sets up time tracking policies in the EMS. The employee uses the system to clock in and out, request time off, and view their work hours. The manager approves time-off requests, manages employee schedules, and monitors overtime hours.

UC 04: Payroll Management

Use case	Payroll Management
Actors	HR Manager, Employee, Finance Department
Type	Primary
Description	The HR Manager sets up employee compensation information in the EMS. The finance department uses the system to calculate employee paychecks and taxes. The employee can view their pay stubs and manage their direct deposit information.

UC 05: Benefits Management

Use Case	Benefits Management
Actor	HR Manager, Employee, Benefits Provider
Type	Primary

Description	The HR Manager sets up employee benefits information in the EMS. The benefits provider uses the system to manage employee health insurance, retirement plans, and other benefits. The employee can view their benefit options, enroll in benefits, and manage their benefits.
-------------	---

UC 06: Training and Development Management

Use Case	Training and Development Management
Actor	HR Manager, Manager, Employee
Type	Primary
Description	The HR Manager sets up training and development programs in the EMS. The manager assigns training modules to their employees and monitors their progress. The employee completes the training modules and takes assessments through the system.

UC 07: Succession Planning

Use Case	Succession Planning
Actor	HR Manager, Manager, Employee
Type	Primary
Description	The HR Manager sets up succession planning strategies in the EMS. The manager identifies potential leaders and successors in the organization and develops strategies for talent retention. The employee can view their career development path and identify potential opportunities for advancement.

Expanded Use Cases:

UC 01: Onboarding and Offboarding

Use Case	Onboarding and Offboarding
----------	----------------------------

Actors	HR Manager, Manager, Employee
Type	Primary
Description	The HR Manager creates a new employee profile in the EMS, which includes onboarding forms, orientation training, IT setup, and access management. The new employee completes the forms, attends orientation, and receives necessary equipment and access to IT systems. When an employee leaves the organization, the HR Manager removes their access to company systems and assets.
Purpose	HR Manager creates an employee profile in the EMS and assigns the onboarding process to the new employee. New employee logs into the system and completes the required forms such as personal information, tax forms, and emergency contact information. New employee attends orientation training and receives necessary equipment such as laptops and mobile devices. HR Manager configures the system to provide access to IT systems, network drives, and company resources. HR Manager monitors the progress of the onboarding process and approves the completion of each step. When an employee leaves the organization, HR Manager removes the employee's access to company systems and assets.

Typical Course of Events:

Actor Action	System Response
Actor : Recruiter	
Posts job openings and manages applicant resumes in the EMS	
	Tracks applicant information, schedules interviews, and generates hiring reports.

UC 02: Performance Management

Use case	Performance Management
Actors	HR Manager, Manager, Employee
Type	Primary
Description	The HR Manager sets up performance evaluation cycles in the EMS. The manager sets performance goals for their employees, monitors performance metrics, and provides continuous feedback. The employee uses the system to view their progress towards their goals and submits feedback.
Purpose	HR Manager sets up the performance evaluation cycles in the EMS and assigns the managers and employees for the evaluation process. The manager sets performance goals for their employees, which include both quantitative and qualitative objectives. The employee uses the system to track their progress towards their goals and submits feedback on their performance. manager monitors the employee's

	performance and provides continuous feedback, coaching, and training. HR Manager uses the system to generate performance reports and identifies high-performing employees and areas of improvement.
--	---

Typical Course of Events:

Actor Action	System Response
Actor : Manager	
Evaluates employee performance and sets goals using the EMS	
	Stores the performance evaluation data, generates performance reports, and tracks progress towards goals.

UC 03: Time and Attendance Management

Use Case	Time and Attendance Management
Actor	HR Manager, Employee, Manager
Type	Primary
Description	The HR Manager sets up time tracking policies in the EMS. The employee uses the system to clock in and out, request time off, and view their work hours. The manager approves time-off requests, manages employee schedules, and monitors overtime hours.
Purpose	HR Manager sets up the time tracking policies in the EMS and assigns the employees and managers for time tracking. The employee uses the system to clock in and out, request time off, and view their work hours. The manager approves time-off requests, manages employee schedules, and monitors overtime hours. HR Manager uses the system to generate time and attendance reports and identifies any violations or discrepancies.

Typical Course of Events:

Actor Action	System Response
Actor: Employee	
Clocks in or out of work using the EMS	
	Records the time of the clock in or out, calculates the employee's total hours worked, and stores the information for future reference.

UC 04: Payroll Management

Use Case	Payroll Management
Actor	HR Manager, Employee, Finance Department
Type	Primary
Description	The HR Manager sets up employee compensation information in the EMS. The finance department uses the system to calculate employee paychecks and taxes. The employee can view their pay stubs and manage their direct deposit information.
Purpose	HR Manager sets up the employee compensation information in the EMS and assigns the finance department for payroll processing. The finance department uses the system to calculate employee paychecks and taxes. The employee can view their pay stubs and manage their direct deposit information through the system. HR Manager uses the system to generate payroll reports and manage the employee compensation details.

Typical Course of Events:

Actor Action	System Response
Actor : HR manager	
Sets up payroll information in the EMS	
	Calculates employee salaries, withholds taxes and other deductions, and generates paychecks or direct deposit statements.

UC 05: Benefits Management

Use Case	Benefits Management
Actor	HR Manager, Employee, Benefits Provider
Type	Primary
Description	The HR Manager sets up employee benefits information in the EMS. The benefits provider uses the system to manage employee health insurance, retirement plans, and other benefits. The employee can view their benefit options, enrol in benefits, and manage their benefits.
Purpose	HR Manager sets up the employee benefits information in the EMS and assigns the benefits provider for benefits management. The benefits provider uses the system to manage employee health insurance, retirement plans, and other benefits. The employee can view their benefit options and enrol in benefits through the system. The benefits provider uses the system to track the employee's benefit coverage, manage their beneficiary information, and handle any claims or issues. HR Manager uses the system to generate benefits reports and monitor the employee's benefit usage and costs.

Typical course of Events:

Actor Action	System Response
Actor: HR manager	
Sets up employee benefits information in the EMS	
	Calculates employee benefit coverage, handles employee enrollment, and generates benefits reports

UC 06: Training and Development

Use Case	Training and Development Management
Actor	HR Manager, Employee, Manager
Type	Primary
Description	The HR Manager sets up training and development programs in the EMS. The employee can view available training courses, enroll in courses, and track their progress. The manager can monitor the employee's progress and provide feedback.
Purpose	HR Manager sets up the training and development programs in the EMS and assigns the managers and employees for the training process. The employee can view the available training courses, enroll in courses, and track their progress through the system. The manager can monitor the employee's progress, provide feedback, and schedule follow-up training as needed. HR Manager uses the system to generate training reports and identify areas where additional training may be needed.

Typical course of events:

Actor Action	System Response
Actor: Employee and Manager	
Employee views available training courses and enrolls in courses using the EMS, Manager monitors employee progress and provides feedback.	
	Tracks the employee's progress in training courses, generates training reports, and identifies areas where additional training may be needed.

UC 07: Succession Planning

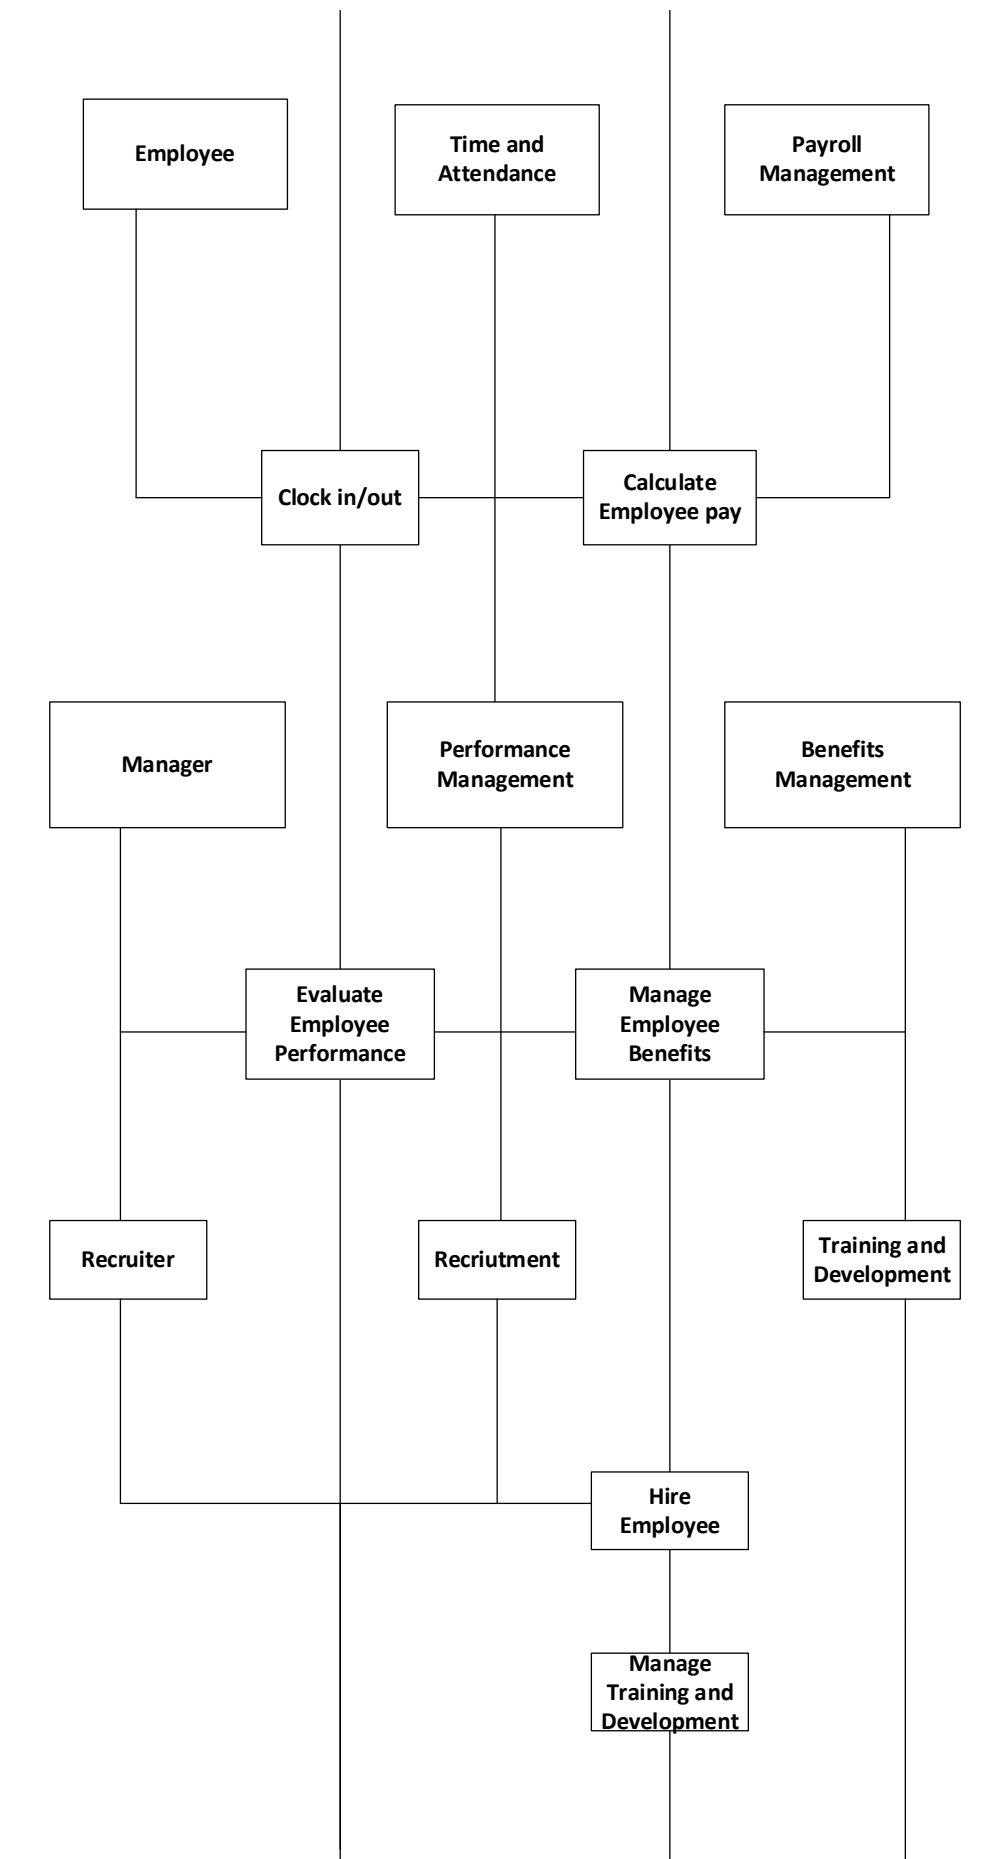

Use Case	Succession Planning
----------	---------------------

Actor:	HR Manager, Employee, Manager
Type	Primary
Description	The HR Manager sets up succession plans in the EMS. The manager can view the employee's career development plans, identify potential successors for critical roles, and provide training and development opportunities to prepare employees for future roles.
Purpose	HR Manager sets up the succession plans in the EMS and assigns the managers and employees for the career development process. The manager can view the employee's career development plans, identify potential successors for critical roles, and provide training and development opportunities to prepare employees for future roles. The manager can use the system to track the progress of the employee's career development, provide feedback, and schedule follow-up training as needed. HR Manager uses the system to generate succession planning reports and identify areas where additional development may be needed to fill key roles.

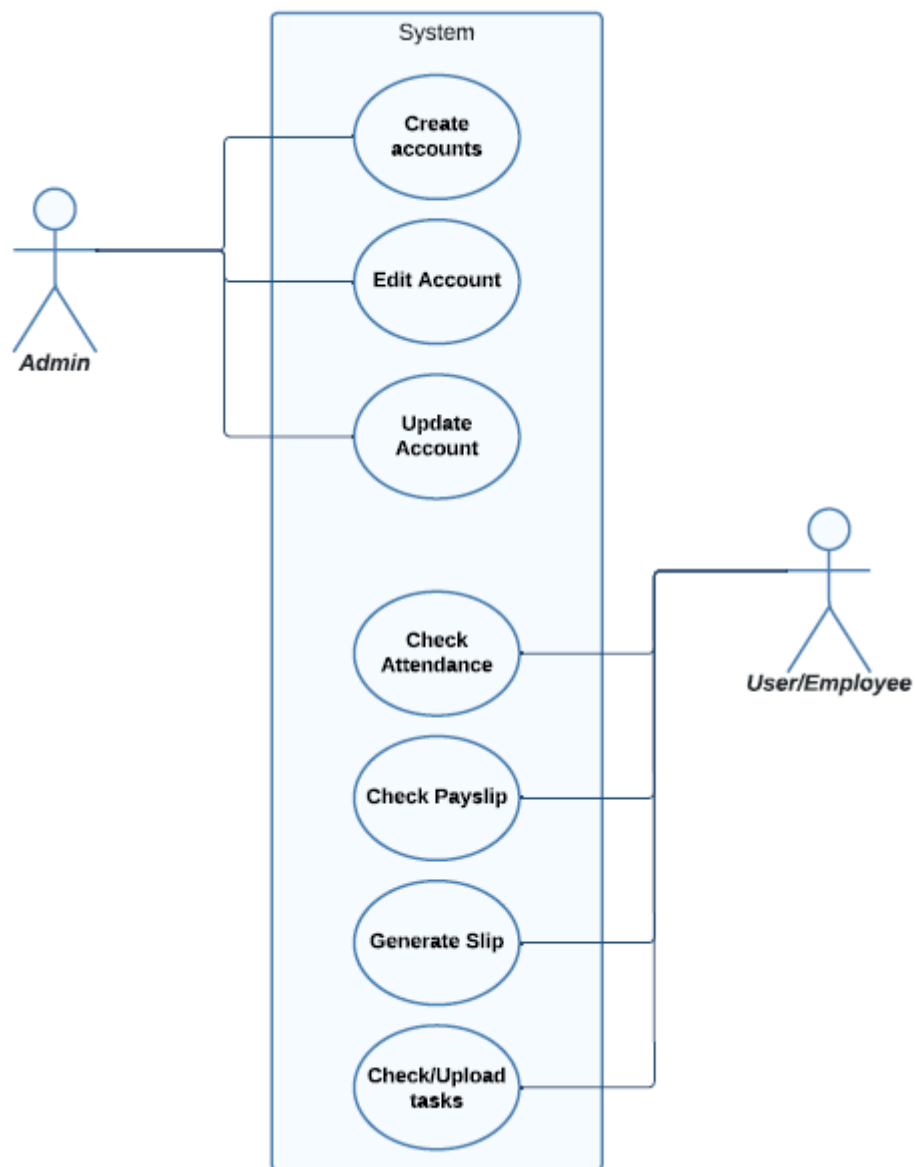

Typical course of events:

Actor Action	System Response
Actor: Manager	
Sets up succession plans in the EMS and assigns employees for the career development process	
	Tracks employee career development progress, identifies potential successors for critical roles, and generates succession planning reports.
